Professional Summary

Final-year B.Tech student specializing in Artificial Intelligence & Machine Learning with hands-on experience in machine learning, NLP, Generative AI, data analytics, and Python-based AI applications. Experienced in developing ML pipelines, AI-powered applications, and data-driven solutions using Python, TensorFlow, Scikit-learn, Streamlit, Docker, and Supabase. Interested in ML Engineering, AI Engineering, NLP, and building practical, scalable AI solutions.

Education

Dr. A.P.J. Abdul Kalam Technical University (AKTU) Expected 2027
Bachelor of Technology (B.Tech) – Artificial Intelligence & Machine Learning

Technical Skills

Programming: Python, SQL, C++ (Basic)

Machine Learning: Scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, Supervised Learning, Unsupervised Learning, Reinforcement Learning

AI/ML: NLP, Generative AI, Computer Vision, Transfer Learning, Feature Engineering, Model Evaluation

Software Engineering: Git, GitHub, Docker, REST APIs, OOP, Linux, GitHub Actions (CI/CD), Software Testing (Basic)

Data & Databases: Pandas, NumPy, Supabase

Tools: Streamlit, Jupyter Notebook, Google Colab, Vertex AI, Gemini, VS Code

Experience

InAmigos Foundation (IAF) – Machine Learning Intern Aug 2026

- Studied core Artificial Intelligence and Machine Learning concepts including Deep Learning, Supervised Learning, Unsupervised Learning, and Reinforcement Learning.
- Applied theoretical concepts through practical learning activities and real-world examples.
- Prepared structured learning material documenting key AI and Machine Learning concepts and applications.
- Strengthened foundational understanding of AI/ML workflows and machine learning methodologies.

IBM SkillsBuild – Artificial Intelligence Intern Jun 2026 – Aug 2026

- Completed a virtual internship focused on Artificial Intelligence through IBM SkillsBuild.
- Developed practical understanding of Artificial Intelligence concepts, tools, and real-world applications through hands-on learning.
- Applied AI, Machine Learning, and Generative AI concepts through structured internship activities and practical assignments.
- Strengthened foundational knowledge of AI/ML workflows and Generative AI applications.

Tata iQ – GenAI & Data Analytics Project Trainee Aug 2025

- Conducted exploratory data analysis using Generative AI tools to identify customer behavior patterns and delinquency risks.
- Developed predictive approaches for risk segmentation and collections prioritization.
- Applied Responsible AI principles including fairness, transparency, and Explainable AI (XAI) in solution design.
- Gained practical exposure to AI-driven business analytics and data-informed decision making.

Open Source Contributions

Termstory (Python)

- Contributed multiple pull requests improving exception handling, logging, and overall code reliability.
- Replaced broad `except Exception` handlers with specific exception types following Python best practices.
- Collaborated with maintainers through iterative code reviews, addressing 20+ review comments across multiple pull requests.
- Improved code readability and maintainability while following established project contribution guidelines.

GitHub Contributions

- 200+ commits across software engineering and AI repositories including MLCopilot Platform, TalentLens AI, and Multimodal Product Price Prediction.
- Active contributor to collaborative and personal GitHub repositories using Git-based development workflows.

Projects

ML Copilot Platform Python — Streamlit — Docker — Supabase

- Developing a modular platform to simplify the machine learning lifecycle through dataset management, experiment tracking, and workflow automation.

- Designed reusable backend modules and AI-assisted utilities for project organization, feature engineering, model evaluation, and experiment management.
- Integrated Docker, REST APIs, and Supabase for authentication, backend services, and portable deployments.
- Followed modular software architecture and Git-based development practices to improve maintainability and scalability.

TalentLens AI

Python — NLP — Streamlit

- Developed an intelligent resume screening platform that ranks candidates against job descriptions using TF-IDF, Sentence Transformers, and cosine similarity.
- Implemented semantic search, recruiter dashboards, and skill-gap analysis to support candidate evaluation workflows.
- Built an interactive application for resume parsing, candidate ranking, and personalized learning recommendations.

Multimodal Product Price Prediction

Python — TensorFlow — XGBoost

- Built an end-to-end multimodal machine learning pipeline combining textual and visual product information for price prediction.
- Implemented TF-IDF feature extraction, EfficientNet image embeddings, feature engineering, and XGBoost regression.
- Evaluated model performance using MAE, RMSE, and R^2 while comparing multiple feature extraction and regression approaches.

Certifications

IBM Machine Learning with Python | Google Cloud Gemini for Data Scientists and Analysts | Google DeepMind: Build Your Own Small Language Model

Google Cloud Prompt Design in Vertex AI | AWS Introduction to Generative AI | Practicing Test Driven Development with Python
